SELECTION COMMANDER

LJ-V20

LJ-V20-K

VIDEO DISC AUTOCHANGER

LC-V20

LC-V20-K

- Selection commander LJ-V20 or LJ-V20-K and video disc autochanger LC-V20 or LC-V20-K operate in conjunction.
One video disc autochanger LC-V20 or LC-V20-K will handle up to three selection commanders LJ-V20 or LJ-V20-K.

MODELS LC-V20, LJ-V20, LC-V20-K AND LJ-V20-K HAVE TWO VERSIONS:

Type	Applicable model				Power requirement	Export destination
	LC-V20	LJ-V20	LC-V20-K	LJ-V20-K		
HEM	○	—	○	—	AC220V,240V (switchable)	European continent
AEM	—	○	—	○	AC22V only	European continent

- This service manual is applicable to the HEM and AEM types.
- For the LC-V20-K type, refer to page 138.
- For the LJ-V20-K type, refer to page 137.
- The LC-V20-K is the same as the LC-V20 except for the color.
- The LJ-V20-K is the same as the LJ-V20 except for the color.
- Ce manuel pour le service comprend les explications en français de réglage.
- Este manual de servicio trata del método ajuste escrito en español.

1. SAFETY INFORMATION

ADVARSEL!

Lithiumbatteri. Eksplosionsfare. Udskiftning må kun foretages af en sagkyndig, og som beskrevet i servicemanualen.

Denne advarsel er angivet på produktet eller i brugsvejledningen. Ved udskiftning af lithium batterierne følges nedenstående anvisning. Batterierne må kun udskiftes med batterier af samme type og mærke.

WARNING!

Lithium batteries. Danger of explosion. Replacement must be done by qualified personnel and only by following the instructions given in the service manual.

This warning is stated on the product or in the operating instructions. When replacing the lithium batteries, follow the note below. The batteries must be replaced only by batteries of the same type and manufacture.

VAROITUS!

Litiumparistot. Räjähdyksvaara. Vaihdon saa suorittaa ainoastaan asiantunteva huoltoteknikko noudattamalla huolto-ohjeessa annettuja ohjeita.

Tämä varoitus sijaitsee laitteessa tai käyttöohjeessa. Noudata litiumparistoja vaihtaessasi alla olevaa huomautusta. Paristot on vaihdettava samantyyppisiin ja saman tehtaan valmistamiin paristoihin.

(FOR EUROPEAN MODEL ONLY)

VAROITUS!

2.3 SCHEMATIC DIAGRAMS

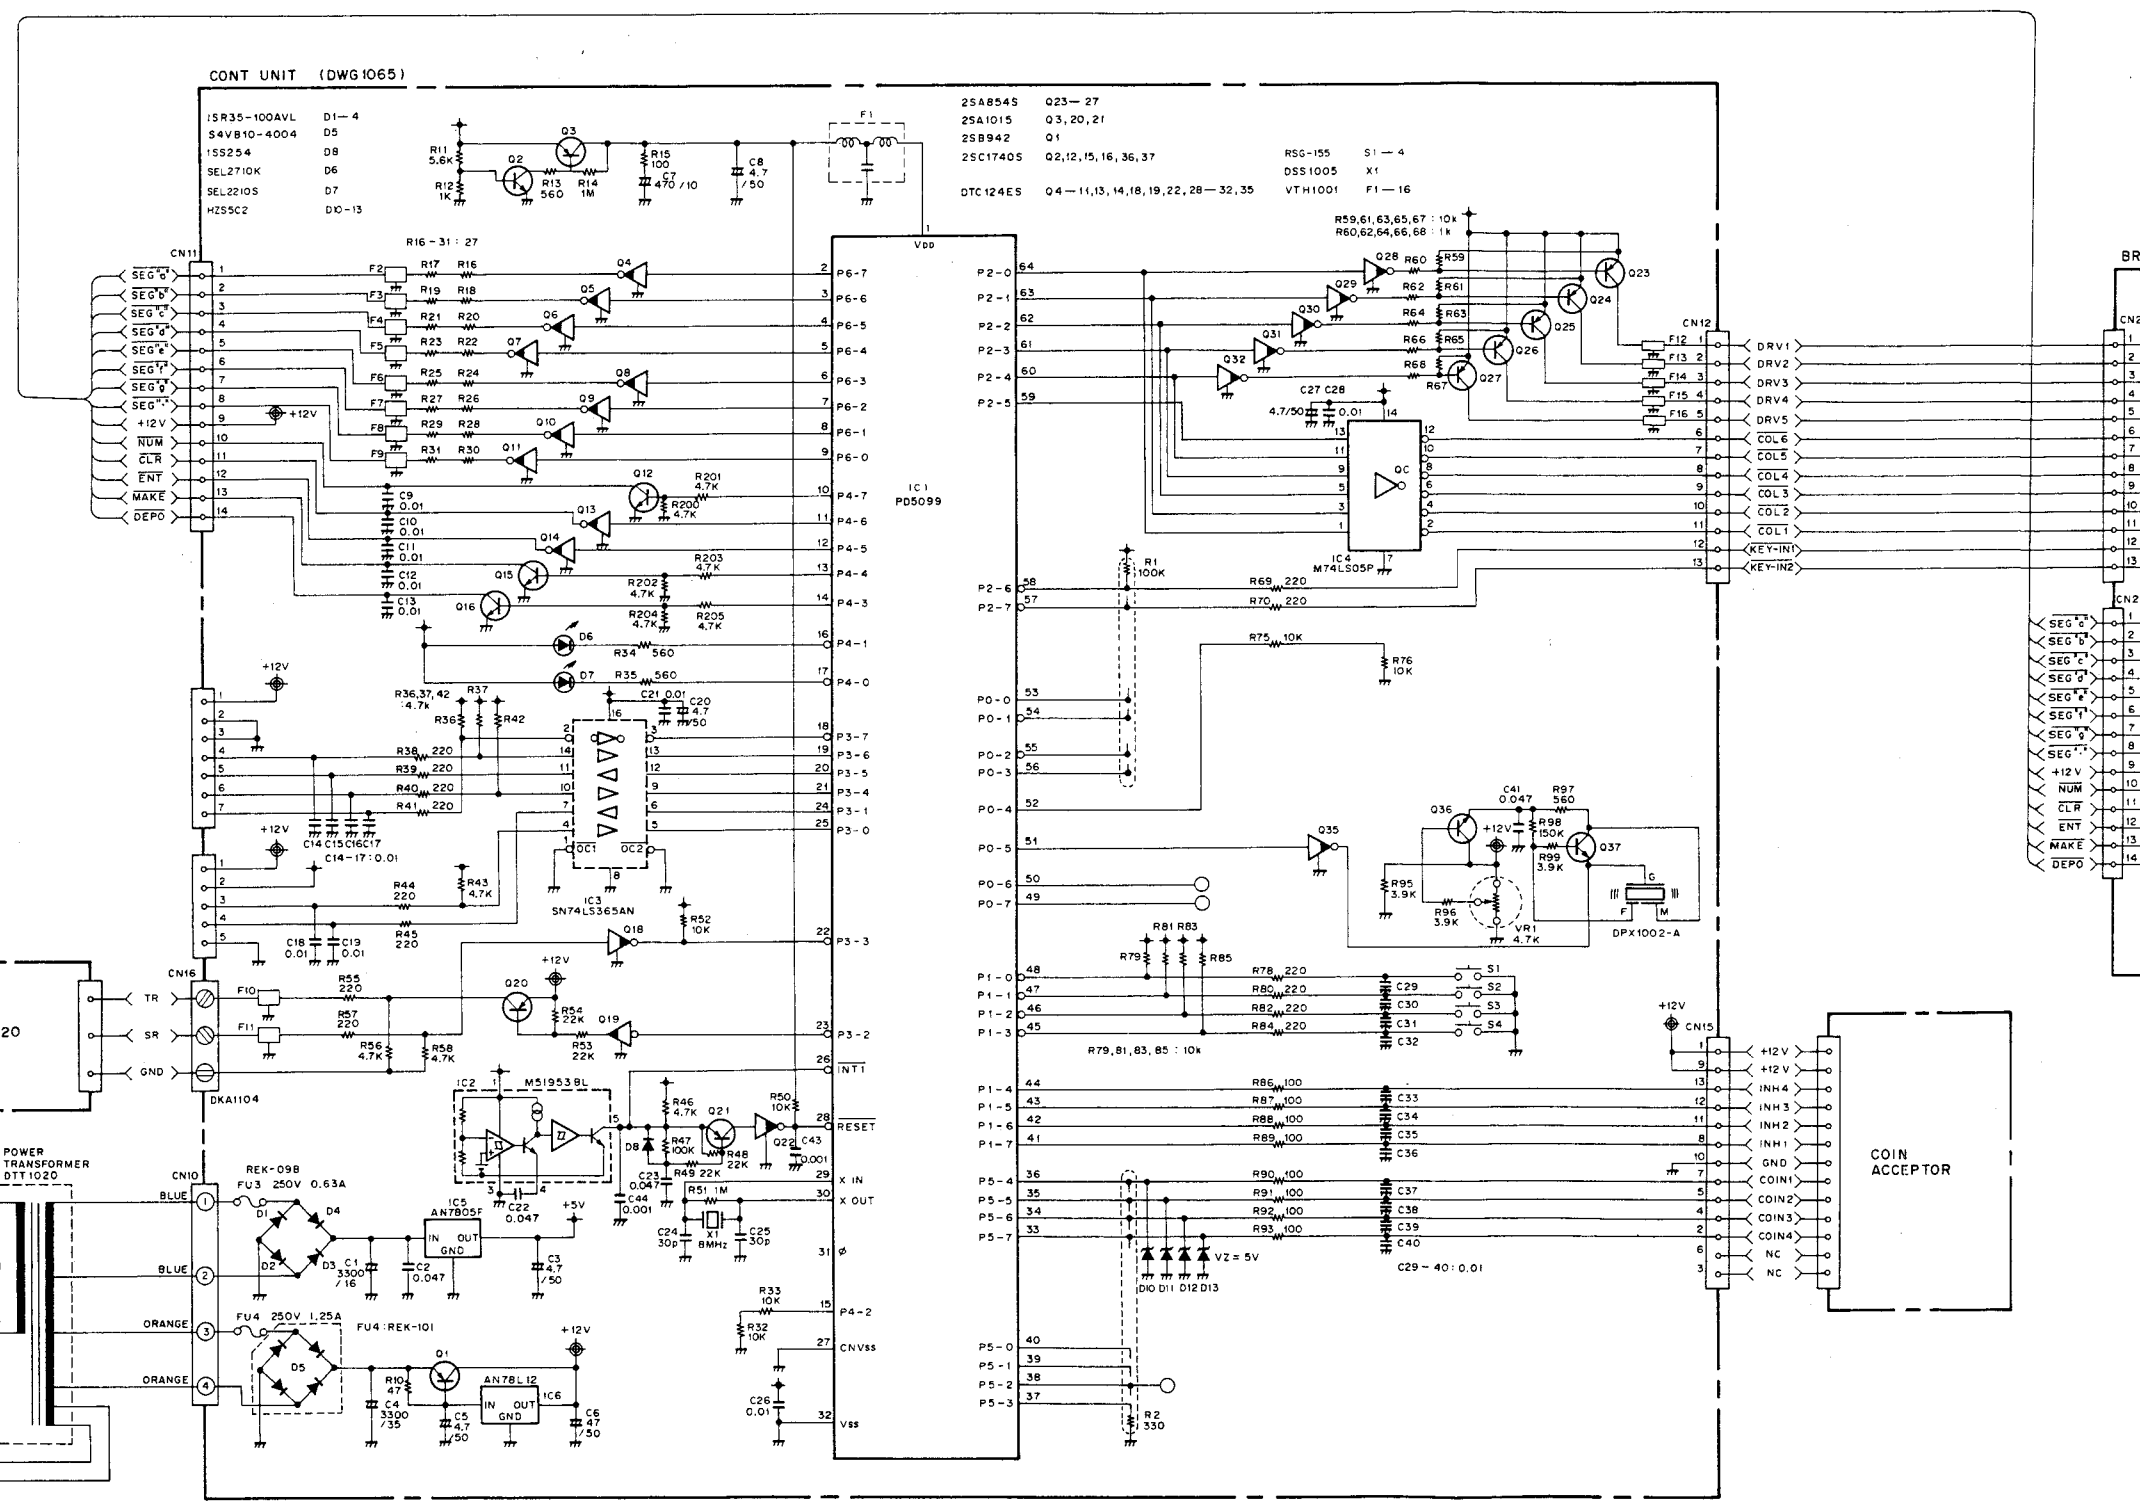

1. RESISTORS :
Indicated in Ω , 1/4W, 1/6W and 1/8W, $\pm 5\%$ tolerance unless otherwise noted k; k Ω , M; M Ω , (F); $\pm 1\%$, (G); $\pm 2\%$, (K); $\pm 10\%$, (M); $\pm 20\%$ tolerance.

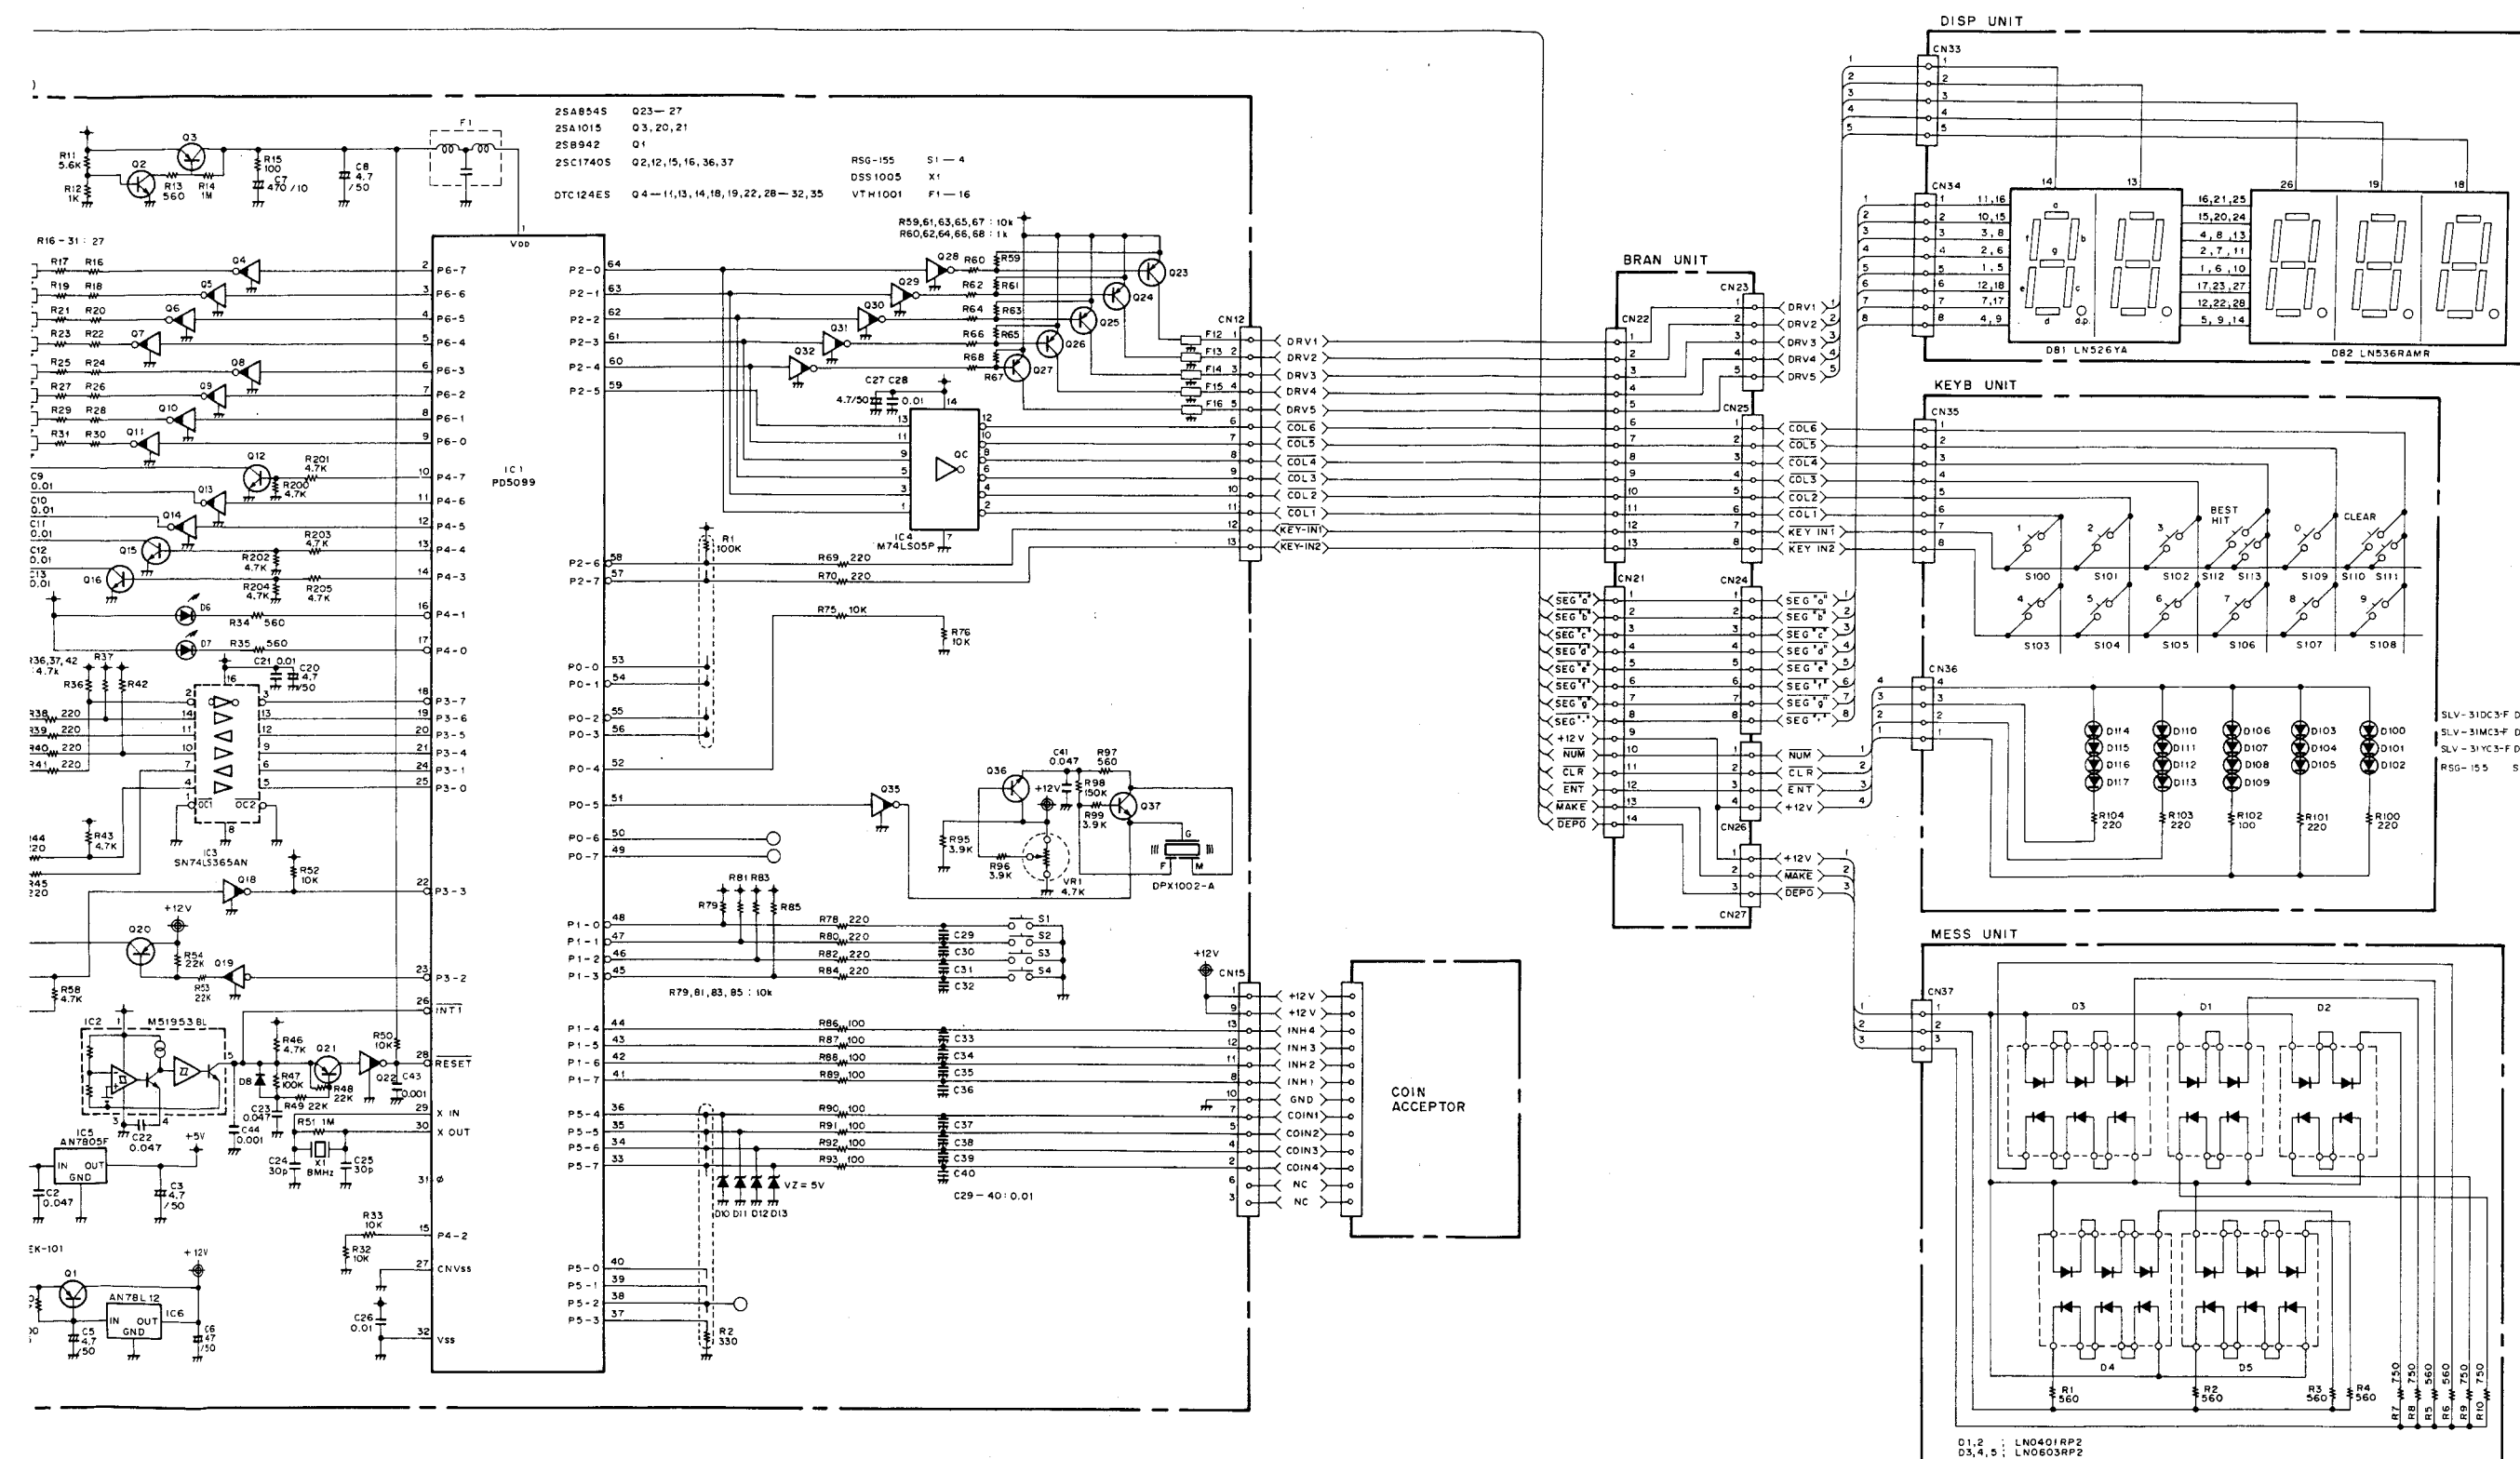

2. CAPACITORS :
Indicated in capacity (μ F)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT :
V : Signal voltage at W+ W, 8 Ω output (1kHz).
DC : DC voltage (V) at no input signal.
Value in () is DC voltage at rated power.
mA : DC current at no input signal.
mV : Signal voltage at FM 1kHz ± 75 Hz DEV.

4. OTHERS :
→ : Signal route.
⊙ : Adjusting point.
The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
* marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

2.4 P.C. BOARD PATTERNS

P.C.B. pattern diagram indication	Corresponding part symbol	Part name	P.C.B. pattern diagram indication	Corresponding part symbol	Part name
		Transistor			Ceramic capacitor
		FET			Mylar capacitor
		Diode			Styro capacitor
		Zener diode			Electrolytic capacitor (Non polarized)
		LED			Electrolytic capacitor (Noiseless)
		Varactor			Electrolytic capacitor (Polarized)
		Tact switch			Power capacitor
		Inductor			Semi-fixed resistor
		Coil			Resistor array
		Transformer			Resistor
		Filter			Resonator
					Thermistor

1. This P.C.B. connection diagram is viewed from the parts mounted side.
2. The parts which have been mounted on the board can be replaced with those shown with the corresponding wiring symbols listed in the above Table.
3. The capacitor terminal marked with shows negative terminal.
4. The diode marked with shows cathode side.
5. The transistor terminal marked with shows emitter.

2.5 ELECTRICAL PARTS LIST

- NOTES :
- Parts without part number cannot be supplied.
 - Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
 - The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5 %, and K = 10 %).
- 560 Ω → 56 × 10¹ → 561 RD1/4PS 561J
- 47k Ω → 47 × 10³ → 473 RD1/4PS 473J
- 0.5 Ω → 0R5 RN2H0R5K
- 1 Ω → 010 RS1P010K
- Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
- 5.62k Ω → 562 × 10¹ → 5621 RN1/4SR 5621F
- The part number of the semiconductors and the pioneer exclusive use parts are not mentioned. Their are mentioned in the schematic diagrams.

	26	VGX1005	Wave length plate assembly
	27	VEB1002	Sheet
	101		PD spring
	102		Optical body
	103		Prism assembly

INSTALLING THE HEAD ASSEMBLY

The Head assembly is supplied with the flexible parts not bent; therefore, use the following procedure to process.

1. Bend as shown by the arrow in Fig. 1 and fasten using double-sided tape and adhesive.
2. With the flexible parts bent as shown in Fig. 1, mount on the pick-up.
3. Mount the flex strip that connects the disc tilt detection PCB and the TRKG and FOCS coils on the Head assembly as shown in Fig. 2.

Note:

The copper foil of the flex strip has little resistance to heat; therefore, soldering should be performed as quickly as possible. Apply the soldering iron to the Head assembly, not to the flex strip.

Fig. 1

Fig. 2

3.3 SCHEMATIC DIAGRAM AND P.C. BOARDS PATTERN

3.3.1 MAIN BODY

3.3.1.1 OVERALL CONNECTION DIAGRAM

- RESISTORS:**
Indicated in Ω , 1/4W, 1/6W and 1/8W, $\pm 5\%$ tolerance unless otherwise noted k; k Ω , M; M Ω , (F); $\pm 1\%$, (G); $\pm 2\%$, (K); $\pm 10\%$, (M); $\pm 20\%$ tolerance.
- CAPACITORS:**
Indicated in capacity (μ F)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.
- VOLTAGE, CURRENT:**
V; Signal voltage at W + W, 8 Ω output (1kHz).
V; DC voltage (V) at no input signal.
Value in () is DC voltage at rated power.
mA; DC current at no input signal.
mV; Signal voltage at FM 1kHz ± 75 Hz DEV.

- OTHERS:**
+; Signal route.
⊗; Adjusting point.
The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
* marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

3.4 ELECTRICAL PARTS LIST

- NOTES :
- Parts without part number cannot be supplied.
 - Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
 - The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - When ordering resistors, first convert resistance values into code form as shown in the following examples.
Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5 %, and K = 10 %).
560 Ω → 56 × 10¹ → 561 RD1/4PS

5	6	1
---	---	---

 J
47k Ω → 47 × 10³ → 473 RD1/4PS

4	7	3
---	---	---

 J
0.5 Ω → 0R5 RN2H

0	R	5
---	---	---

 K
1 Ω → 010 RS1P

0	1	0
---	---	---

 K
Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
5.62k Ω → 562 × 10¹ → 5621 RN1/4SR

5	6	2	1
---	---	---	---

 F
 - The part number of the semiconductors and the pioneer exclusive use parts are not mentioned. Their are mentioned in the schematic diagrams.

3.5 ADJUSTMENT

- Be sure to turn off the power before starting adjustment which requires no power supply. Otherwise, a serious overrun may occur in the internal mechanism.
- If the adjustment requires power supply, make adjustment in the manual mode. To enter the manual mode, keep the door open, and while pressing down S101 and S102 in the MCDR unit (DWG1053), turn on the power. (If S101 and S102 are kept pressed for more than 10 seconds after the power is turned on, the equipment enters another mode.) In the manual mode, each of the changer mechanisms can be operated independently. (Refer to page 135 for details.)

3.5.1 Adjustment of the space between the reverse gear A and the reverse base assembly

Adjust the space between the reverse gear A and the slider washer so that it is $0.1 \pm_{-0.05}^{+0.1}$ mm to obtain a suitable clearance for the backlash of the reverse gear A and B in the direction of thrust.

Fig. 3-5-1

Fig. 3-5-2

3.5.2 Adjustment of the space between the chuck gear B and the arm base A

Adjust the space between the chuck gear B and the slider washer so that it is $0.1 \pm_{-0.05}^{+0.1}$ mm to obtain a suitable clearance for the backlash of the chuck gear B in the direction of thrust.

Fig. 3-5-3

Fig. 3-5-4

3.5.3 Adjustment of the space between the chuck gear A and the arm base A

Fig. 3-5-5

Adjust the space between the chuck gear A and the arm base A so that it is $0.7 \pm 0.2\text{mm}$ to obtain a suitable clearance for the chuck gear A.

Fig. 3-5-6

3.5.4 Adjustment of the space between the horizontal drive worm gear and the pulley E

Fig. 3-5-7

Adjust the space to obtain a suitable backlash of the horizontal drive worm gear.

- ① Loosen the fixing screw of the motor attachment plate.
- ② Adjust the adjustment screw so that there is a slight contact between the worm gear of the motor and the worm wheel of the pulley E.
- ③ Turn the adjustment screw approximately 180 degrees so that a clearance of 0.1 to 0.25 mm is obtained.
- ④ Tighten the fixing screw.

Fig. 3-5-8

3.5.5 Adjustment of the horizontal position of the arm and the reverse stop position

Adjust them so that a disc can be set at the level position in the LDP assembly and the disc rack. When the horizontal position of the arm is adjusted correctly, the reverse stop position may become incorrect, or vice versa. When one of them has been adjusted, make sure that the other remains correct.

Fig. 3-5-9

3.5.5.1 Adjustment of the arm horizontal position (direction A - B in Fig. 3-5-9)

- ① Place a disc with little warpage (such as a test disc) on the LDP assembly and fix it with the clasper. The surface upper side of the disc is regarded as the reference surface. (Or, remove the LDP assembly and place a flat plate on the three bosses for the LDP assembly attachment. The surface of the plate is regarded as the reference surface.)
- ② Place a disc with little warpage (except a test disc with aluminium backing since it is heavier than a normal disc) so that the disc is fixed by the arm.
- ③ Move the arm a few centimeters above the reference surface manually or in the manual mode. (Refer to page 135 for the manual mode.)
- ④ Loosen the arm base A fixing screw to the temporary tightening position.
- ⑤ Adjust the slant in the direction A - B by turning the eccentric pin. Adjust so that the difference between the distance "a" and the distance "b" ($b - a$) is 0 ± 0.15 mm when the disc is fixed by the arm.
Distance "a": distance between the point A and the reference surface
Distance "b": distance between the point B and the reference surface
- ⑥ Tighten the arm base A fixing screw.

3.5.5.2 Adjustment of the reverse rotation stop position (direction C - D in Fig. 3-5-9)

- ⑦ Prepare as described in steps ① and ② in the adjustment of the arm horizontal position. Move the arm approximately 15cm above the reference surface.
- ⑧ Set the arm so that the side for the disc side A faces upward. (Screw positions on the arm are seen.)
- ⑨ Loosen the nut of the side A stop position adjustment screw (the right one when seen from the arm side).
- ⑩ Adjust the slant in the direction C - D by turning the side A stop position adjustment screw. Adjust so that the difference between the distance "c" and the distance "d" ($d - c$) is 0 ± 0.15 mm when the disc is fixed by the arm.
Distance "c": distance between the point C and the reference surface
Distance "d": distance between the point D and the reference surface
Turn the screw clockwise to increase the distance "c" and counterclockwise to increase the distance "d".
- ⑪ When the adjustment is completed, tighten the nut of the side A stop position adjustment screw.
- ⑫ Turn over the arm manually or in the manual mode so that the side for the disc side B faces upward.
- ⑬ Loosen the nut of the side B stop position adjustment screw (the left one when seen from the arm side).
- ⑭ Adjust the slant in the direction C - D by turning the side B stop position adjustment screw. Adjust so that the difference between the distance "c" and the distance "d" ($d - c$) is 0 ± 0.15 mm when the disc is fixed by the arm.
Distance "c": distance between the point C and the reference surface
Distance "d": distance between the point D and the reference surface
Turn the screw clockwise to increase the distance "d" and counterclockwise to increase the distance "c".
- ⑮ When the adjustment is completed, tighten the nut of the side B stop position adjustment screw.

3.5.6 Adjustment of the vertical drive system

3.5.6.1 Adjustment of the space for the disc slit

When the disc slit is replaced, adjust the space between the slit and the photo interrupter, and make verification of the vertical motor encoder pulse duty ratio/phase difference (as described in 3.5.6.2.) Adjust the space between the disc slit and the photo interrupter so that it is $0.5 \pm 0.1\text{mm}$ by turning the hexagonal screw of the disc slit.

Fig. 3-5-10

3.5.6.2 Verification of the vertical motor encoder pulse duty ratio/phase difference

(1) Verify that the duty ratio and the phase difference of pins CN534 ③ (VOA) and ② (VOB) satisfy the following standard both in the rotation CCW (upward) and rotation CW (downward) when the VH base is activated in both directions in the manual mode. (Refer to page 135 for the manual mode.)
(For the rotation CW as observed from the motor axis)

(For the rotation CCW as observed from the motor axis)

Fig. 3-5-11

	Formula to be applied	Standard
Duty ratio	$DA \text{ (cw, ccw)} = \frac{TA2}{TA1} \times 100 (\%)$	DA, DB (cw, ccw) = 40 - 60 %
	$DB \text{ (cw, ccw)} = \frac{TB2}{TB1} \times 100 (\%)$	
Phase difference	$0 \text{ (cw)} = \frac{T0}{TA1} \times 360 (^{\circ})$	0 (cw, ccw) = 90 - 120 °
	$0 \text{ (ccw)} = \frac{T0}{TB1} \times 360 (^{\circ})$	

Table 3-5-1

(2) If the above standard is not satisfied, the following standard should be satisfied.
(for the rotation CW as observed from the motor axis)

(for the rotation CCW as observed from the motor axis)

Fig. 3-5-12

	Formula to be applied	Standard
Division ratio	$D1 \text{ (cw, ccw)} = \frac{T1}{T5} \times 100 (\%)$	D1 - 4 (cw, ccw) = 5 - 60 %
	$D2 \text{ (cw, ccw)} = \frac{T2}{T5} \times 100 (\%)$	
	$D3 \text{ (cw, ccw)} = \frac{T3}{T5} \times 100 (\%)$	
	$D4 \text{ (cw, ccw)} = \frac{T4}{T5} \times 100 (\%)$	

Table 3-5-2

(3) If neither the above standards (1) nor (2) are satisfied, the vertical motor speed detection system is out of order.

3.5.6.3 Adjustment of the VD pulley position

Set the VD pulley so that the screw comes into the V-shaped groove, and fix the VD pulley by the screw so that the space between the pulley and the flange of the gear box assembly is $0.5 \pm 0.2\text{mm}$.

Fig. 3-5-13

3.5.6.4 Adjustment of the timing belt tension (between the pulley D and the VD pulley)

Adjust so that the pulley holder assembly is pulled by the force of $8 \pm 1\text{kg}$ by turning the adjustment nut.

Fig. 3-5-14

3.5.6.5 Adjustment of the VMDR unit (DWP1011)

Fig. 3-5-15

Adjustment of the VMDR unit (DWP1011)

Item	Content and position of the adjustment	Adjustment specifications	Adjustment value
1	Adjustment of the pulse width VMDR unit VR1 (DWP1011)	①Set VR1 to the mechanical center position. ②Adjust VR1 (semi-fixed resistance of 10 kilohms) so that the pulse width falls in the value shown to the right by observing TP1 of the VMDR unit using an oscilloscope. During the adjustment, the VH base should be moved upward or downward in the manual mode. (Refer to page 135 for the manual mode.) The vertical motor rotates at the lowest speed or the secondary speed. Turn VR1 clockwise to increase the pulse width (consequently to decrease the speed), and counterclockwise to decrease the pulse width (consequently to increase the speed.)	 $22 \pm 1 \mu\text{sec}$

3.5.6.6 Adjustment of the vertical stop position

1. Prepare a normal disc with no warpage. (Do not use a test disc with aluminium backing since it is heavier than a normal disc.)
2. Set the disc in the rack manually or in the manual mode so that the disc is fixed by the arm. See page 135 for the manual mode. When setting the disc manually, be sure to turn off the power. Otherwise, the internal mechanism may overrun and become harmful.
3. Move the arm upward manually or using the vertical movement mode 1 in the manual mode so that the disc comes to the position just between the upper surface of the disc stopper and the bottom surface of the upper rack (where the disc can be removed.) Do not use the vertical movement mode 2 since the arm will move up to the next stop position as controlled by the sensor.)
4. Loosen the two screws ① which fix the vertical stop position sensor (VSNB unit).
5. Observe the vertical stop position sensor signal by observing the DC voltage at pins 33, 35 and 36 of IC1 in the MCDR unit (DWG1053).
6. Turn the vertical stop position sensor (VSNB unit) adjustment screw ② so that the voltage at pins 33 and 35 is HIGH (5V) and the voltage at pin 36 is LOW (0V).
7. Tighten the two screws ① to fix the vertical stop position sensor (VSNB unit).
8. Move the arm downward manually or using the vertical movement mode 1 in the manual mode to the position where the disc can be set in the rack. At this time, verify that the voltage at pin 33 is LOW (0V) and the voltage at pins 35 and 36 is HIGH (5V). If these voltages are not obtained, readjust the adjustment screw.

Fig. 3-5-16 Adjustment of the vertical stop position

3.5.7 Adjustment of the door position

If the door position is not correct, adjust it as described below.

3.5.7.1 Moving the door forward/backward

Loosen the fixing screw of the sliding hinge, adjust the position of the hinge and fix it again. If the upper and lower hinges are moved by the same amount, the door position is adjusted forward/backward. (Refer to Fig. 3-5-17.) If the two hinges are moved by the different amount, the slant of the door can be adjusted.

Fig. 3-5-17 Adjusting the door position forward/backward

3.5.7.2 Moving the door to the right/left

Turn the right/left position adjustment screw at the hinge clockwise to move the door to the right, and counterclockwise to move it to the left. If upper and lower adjustment screws are turned by the same amount, the door position is adjusted to the left or to the right. (Refer to Fig. 3-5-18.) If they are turned by the different amount, the door inclination can be adjusted. (Refer to Fig. 3-5-19.)

Fig. 3-5-18 Adjusting the door position to the right/left

Fig. 3-5-19 Adjusting the door inclination

3.5.7.3 Moving the door upward/downward

Loosen the height adjustment screws of both the upper and lower sliding hinges, adjust the door height, and tighten the screws. (Refer to Fig. 3-5-20.)

Fig. 3-5-20 Adjusting the door height

3.6 DISASSEMBLY

3.6.1 REPLACEMENT OF LDP ASSEMBLY (DXX1170)

[Removal]

1. Open the door by the key. When the door is open, the LC-V20 is automatically reset to its initial status, unless there is any trouble in the changer mechanism. (In the initial status, a dummy disc is clamped on the LDP assembly (DXX1170).)
2. Release the clamp manually or in the manual mode. When releasing manually, be sure to turn off the power in advance, or the internal mechanism may overrun. For the manual mode, refer to page 135. Then return the dummy disc to the disc rack, and move the VH base to the very upper position. Turn off the power, if it has been turned on.
3. Remove the three screws ① which fix the LDP assembly (DXX1170) to the LDP base assembly.

4. Free the wires connected to the LDP assembly (DXX1170) from the catches, and put the LDP assembly in the standing position as shown in illustration a.
5. Remove the wires which connect the LDP assembly to the main unit from the LDP assembly, and remove the LDP assembly.

[Installation]

6. To install the LDP assembly (DXX1170), follow the reverse procedure of removal. When the door is closed and power is turned on after the LDP assembly has been installed, the LC-V20 automatically executes the operation check and enters the standby mode in the initial status.

Fig. 3-6-1 Replacement of the LDP assembly (DXX1170)

3.6.2 REPLACEMENT OF THE ARMFUL ASSEMBLY (DXX1135)

[Removal]

1. Open the door by the key.
2. Move the armful assembly (DXX1135) to the position where it can be easily removed manually or in the manual mode. When moving manually, be sure to turn off the power in advance, or the internal mechanism may overrun. Use the manual mode if there is no trouble in the moving system. (For the manual mode, refer to page 135.)
3. Remove the three screws ① and remove the sensor cover.
4. Remove the flexible cord (DDD1007) which connects the VCMD unit and the HCNC unit from CN426 on the VCMD unit.
5. Remove the two screws ② and remove the HSNB unit from the armful assembly (DXX1135). (Since the HSNB unit is a component of the armful assembly, it should be replaced at the same time.)

6. Loosen the screw ③ and loosen the belt presser. This allows the armful assembly (DXX1135) to be removed from the timing belt (DWS-103).
7. Loosen the two screws ④ using a hexagon wrench, and remove the armful assembly (DXX1135) from the VH base together with the guide bar. Then remove the guide bar from the armful assembly (DXX1135).

[Installation]

8. To install the armful assembly (DXX1135), remove the HSNB unit temporarily, and follow the reverse procedure of removal. Be sure that the projections on the armful assembly are correctly aligned to the grooves of the timing belt. (Refer to illustration b.)

Fig. 3-6-2 Replacement of the armful assembly (DXX1135)

3.6.3 REMOVAL OF THE UPPER BOARD BLOCK

1. Open the door by the key.
2. Remove the two screws ①. The upper board block can be pulled out within the length of the wires.
3. To remove the upper board block completely, disconnect the wires which connect the upper board block to the changer mechanism and the LDP assembly, etc. Disconnect also CN612 and CN620 on the SCNT unit (DWG1064), CN601 and CN602 on the AVHB unit (DWK1006), and CN528, CN529 and CN531 on the SYPS unit (DWR1028). When installing the upper board block, make sure that the wires are reconnected correctly.

Fig. 3-6-3 Removal of the upper board block

3.6.4 REMOVAL OF THE DOOR

1. Open the door by the key.
2. Loosen the two screws ① (upper and lower) which fix the sliding hinges to the hinge plates.
3. Remove the sliding hinges from the hinge plates by sliding the hinges. Remove then the door.

Fig. 3-6-4 Removal of the door

3.6.5 REMOVAL OF THE SIDE PANELS

(Remove the right panel and the left panel in the same way.)

1. Remove the screws ① (four on each side) and remove the catches. (The catches are fixed directly to the main unit.)
2. Remove the screws ② (three on each side).
3. Slide the side panels backward, and then remove them.

Fig. 3-6-5 Removal of the side panels

3.6.6 REMOVAL OF THE TOP PANEL

1. Remove the four screw covers B ① using a minus screw driver, etc.
2. Remove the four screws ② and then remove the top panel.

Fig. 3-6-6 Removal of the top panel

3.6.7 REMOVAL OF THE REAR PANEL

1. Remove the seven screws ① and then remove the rear panel.

Fig. 3-6-7 Removal of the rear panel

3.6.8 REMOVAL OF THE UPPER FRAME

1. Remove the door, side panels, top panel, rear panel and upper board block. (Refer to pages 127 to 129 for each removal.)
2. Remove the wires from the upper frame.
3. Remove the screw ① which fix the upper frame to the back plate C.
4. Remove the sixteen screws ②
5. Remove the upper frame by pulling it upward.

Fig. 3-6-8 Removal of the upper frame

3.6.9 REMOVAL OF THE UPPER BASE

1. Remove the upper frame. (Refer to "3.6.8 REMOVAL OF THE UPPER FRAME.")
2. Remove the pulley holder assembly by removing the nut ①.
3. Remove the two screws ② which fix the upper base to the rail.
4. Remove the three nuts ③
5. Remove the upper base by pulling it upward.

Fig. 3-6-9 Removal of the upper base

3.6.10 REMOVAL OF THE VH BASE

1. Remove the upper base. (Refer to "3.6.9 REMOVAL OF THE UPPER BASE.")
2. Move the VH base manually to the position where the wire assemblies fixed to the VH base are seen through the slits on the rails, and the holes of the weight assembly coincide with the holes of the rails. (The VH base can be moved easily when the timing belt is removed from the VD pulley, since the pulley holder has been removed at the upper base removal.)
3. Insert M6 screws or similar objects (such as screw drivers) to the holes of both the weight assembly and the rails so that the weight assembly will not drop when the wire assembly is removed.
4. Remove the screw ① and remove the belt presser.
5. Support the VH base by the hand so that it will not drop when the wire assembly is removed, and remove the wire assembly by removing the two nuts ②.
6. Remove the VH base by pulling it upward.

Fig. 3-6-10 Removal of the VH base

3.6.11 HOW TO MOVE THE VH BASE WHEN IT STOPS HALFWAY

1. Moving the VH base manually

Refer to Fig. 3-6-11. Turn the screw ① 6 or 7 times using a hexagon screw driver or a hexagon ball driver with a distance of 2.5mm between the two opposite sides. Then push down the screw ① and loosen the belt. The VH base can be moved manually.

2. Moving the VH base when it has stopped on the LDP during playback (and the manual mode cannot be entered by any cause)

If the clamber is moved down, lift up the clamber manually by turning the crank arm or the SW cam to the right, since the screw ① cannot be accessed by the screw driver. (Refer to Fig. 3-6-12.) Remove the disc from the arm, and loosen the screw. Then proceed as described above 1.

3. Fixing the belt (for installation)

Before turning the screw ①, make sure that the belt and the belt presser coincide correctly.

Fig. 3-6-11

Fig. 3-6-12

3.7 SERVICE MODE

The LC-V20 is supplied with the service mode for the operation test and checking of the changer mechanism in the laser juke box.

1. Normal mode
2. Manual mode

How to enter each mode

3.7.1. NORMAL MODE

In this mode, the LED on the MCDR unit is not light except when an error occurs, or S101 or S102 is pressed.

● Error indication

When the CPU which controls the mechanism detects an error, the error indication appears. The error indication and the error numbers appear alternately in each 0.8 second.

Ex.)

When an error occurs, the error number indication remains lit until the error indication is cleared. When the power is turned on again and operation is possible, only the error number is displayed. Press S101 and S102 simultaneously to see the operation mode at the moment the error occurred.

How to clear the error indication

Turn on the power while pressing S103 and S104. The error indication will be cleared.

● If only S101 is pressed

The 7-segment LED will show the operation mode of the CPU which controls the mechanism.

● If only S102 is pressed

The 7-segment LED will show the vertical address (in decimal notation). The address of the first tray is 1, and the address of the LDP is 25. The indication (up limit) means the position above the first tray, and the indication (down limit) means the position under the LDP.

Error numbers

Error No.	Meaning
01	Trouble in the vertical sensor
02	Vertical address count error
03	Vertical motor overrun (Trouble in rotary encoder pulse)
04	Overrun in vertical movement (Trouble in address count lap time)
05	Trouble in 24V power line (Trouble in fuse, etc.)
07	Trouble caused by time over error in vertical movement
10	Trouble in AV SELECT signal from LDP
12	Trouble in EEP ROM
17	Time over error in movement
27	Time over error in horizontal movement
31	Trouble in the clamber switch (Simultaneous activation, etc.)
37	Time over error in clamber operation
41	Trouble in chuck sensor (Two chuck sensor outputs are both HIGH.)
47	Time over error in chuck operation
51	Trouble in turnover sensor (Two turnover sensor outputs are both HIGH.)
56	Turnover trouble at the rack side (Operation impossible)
57	Time over error in turnover movement
99	No backup memory, no place where the disc should be returned.

Operation modes

● Initial modes

Mode No.	Mode
0.0	Chuck open/close when disc clamped on LDP, waiting SPDL STOP
0.1	Horizontal movement toward LDP
0.2	Clamp down, chuck closed
0.3	Clamp initial up
0.4	Initial vertical movement, movement to the turnover address (13th disc)
0.5	Turnover (B→A)
0.6	Vertical movement toward tray
0.7	Horizontal movement, chuck open, vertically 4.2mm down
0.8	Horizontal movement toward tray, chuck open, vertically down
0.9	Vertical backup memory cleared, waiting chuck open
0.A	Clamp initial up, checking vertical address
0.B	Vertical movement to the dummy disc address
0.C	Chuck close start
0.D	Chuck close, vertically 4.2mm up
0.E	Horizontal movement toward LDP
0.F	Vertical movement, checking vacant tray

● Waiting modes

Mode No.	Mode
1.1	Sending DATA REQ to MPU of SCNT
1.2	Waiting selection number data from MPU of SCNT

● Setting modes

Mode No.	Mode
2.0	Vertical movement
2.1	Chuck close start
2.2	Chuck closed, vertically 4.2mm up
2.3	Horizontal movement toward LDP
2.4	Vertical movement and turnover movement to the 13th disc
2.5	Turnover (A→B)
2.6	Vertical movement upward above the LDP
2.7	Clamp down, chuck open start
2.8	Chuck open

● LDP modes

Mode No.	Mode
3.0	Sending PLAY command to the LDP
3.1	Waiting spindle start, checking existence of priority
3.2	Checking existence of chapters, searching for chapter.
3.3	Waiting end of chapter search, sending start request signal to MPU of SCNT
3.4	Setting chapter repeat
3.5	Starting playback
3.6	Releasing audio/video squelch
3.7	Standard playback mode
3.8	CM disc play chapter number detected
3.9	CM disc playback mode, checking playback chapter
3.A	Sending playback end signal to MPU of SCNT, sending stop signal to the LDP
3.B	Sending stop signal to the LDP, sending DATA REQ to MPU of SCNT
3.C	Waiting data from MPU of SCNT
3.D	AV SELECT signal verified
3.E	Chapter end, stop mode set
3.F	Chapter end detected

● Return modes

Mode No.	Mode
4.0	Chuck open
4.1	Chuck open
4.2	Chuck open start
4.3	Vertically 4.2mm down, chuck open start
4.4	Checking existence of disc, horizontal movement toward tray
4.5	Turnover (B→A), movement to the vertical disc address
4.6	Turnover (B→A)
4.7	Vertical movement and turnover (B→A)
4.8	Checking spindle stop, chuck closed, clamp up

● Door modes

Mode No.	Mode
5.0	Vertical movement to the dummy disc address
5.1	Chuck close start
5.2	Chuck close, vertically 4.2mm up
5.3	Horizontal movement toward LDP
5.6	Vertical movement upward above the LDP
5.7	Clamp down
5.8	Door mode
5.F	Door mode (mechanism being initialized)

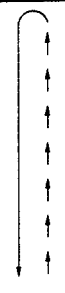

3.7.2. MANUAL MODE

The manual mode is entered when the power is turned on while pressing S101 and S102 on the MCDR unit.

If S101 and S102 are kept pressed for more than 10 seconds after the power is turned on, the manual mode will be released. In the manual mode, operation of each motor, etc. can be checked.

● Operation

In the manual mode, select the required mode by S101 or S102, and activate operation by S103, S104 and the door switch.

S101	S102	Mode indication	Mode	S103	S104	DOOR SW
			LED test mode	—	—	—
			Vertical movement mode 1	UP	DOWN	STOP
			Horizontal movement mode	Toward LDP	Toward rack	—
			Clamp operation mode	UP	DOWN	—
			Chuck operation mode	Closed	Open	—
			Turnover operation mode	Side A to B	Side B to A	—
			Error histogram monitor mode	Selecting error histogram address	Reading error mode No.	Operation mode No.
			Vertical movement mode 2	UP	DOWN	STOP

● LED test mode ()

When the manual mode is entered, first the LED test mode is activated. In this mode, each segment of the 7-segment LED on the MCDR unit is lit up one by one.

● Vertical movement mode

There are two vertical movement modes,  and .

mode

In this mode, the VH base moves upward or downward while S103 or S104 is kept pressed. Approx. 1 second after the VH base started moving, the speed changes from the lowest to the second. The 7-segment LED indicates the vertical address.

mode

In this mode, the VH base moves upward or downward while S103 or S104 is kept pressed, and when S103 or S104 is released, the VH base stops at the next stop position (where a disc is chucked or removed from the tray). When the door switch is pressed, the VH base stops immediately regardless of the stop position. The 7-segment LED indicates the vertical address.

● Horizontal movement mode

In this mode, the VH base moves toward the LDP or toward the rack at the low speed while S103 or S104 is kept pressed. When the sensor detects stop position, the VH base stops.

● Clamp operation mode

In this mode, the clamp moves upward or downward while S103 or S104 is kept pressed. When the switch detects stop position, the clamp stops.

● Chuck operation mode

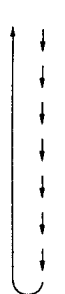

In this mode, the chuck opens or closes while S103 or S104 is kept pressed. When the sensor detects stop position, the chuck stops.

● Turnover operation mode

The arm turns over from side A to side B or vice versa while S103 or S104 is kept pressed. When the sensor detects stop position, the arm stops.

● Error histogram monitor mode

In this mode, errors previously occurred can be displayed. The most recent eight errors are shown. First select the error histogram address by S103, then press S104 to display the content of the error. (Refer to page 133 for the error numbers.) When the door switch is pressed, the operation (Refer to page 134 for the operation modes) mode at the moment the error occurred is displayed. If no error occurred, a horizontal bar will be displayed.

S103		S104	DOOR SW
	- 0	The error number of the current one is displayed.	The operation mode at the moment error occurred is displayed.
	- 1	The error number of the one occurred previously by 1 step is displayed.	The operation mode at the moment error occurred is displayed.
	- 2	The error number of the one occurred previously by 2 steps is displayed.	The operation mode at the moment error occurred is displayed.
	- 3	The error number of the one occurred previously by 3 steps is displayed.	The operation mode at the moment error occurred is displayed.
	- 4	The error number of the one occurred previously by 4 steps is displayed.	The operation mode at the moment error occurred is displayed.
	- 5	The error number of the one occurred previously by 5 steps is displayed.	The operation mode at the moment error occurred is displayed.
	- 6	The error number of the one occurred previously by 6 steps is displayed.	The operation mode at the moment error occurred is displayed.
	- 7	The error number of the one occurred previously by 7 steps is displayed.	The operation mode at the moment error occurred is displayed.

4. FOR LJ-V20-K/AEM TYPE

NOTES :

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "◎" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

Contrast of Miscellaneous Parts

The LJ-V20-K/AEM type is the same as the LJ-V20/AEM type with the exception of the following sections.

Mark	Symbol & Description	Part No.		Remarks
		LJ-V20/AEM type	LJ-V20-K/AEM type

6. SPECIFICATION

LJ-V20-K/LJ-V20 (SELECTION COMMANDER)

Power requirements	22 VAC, 50 Hz
Power consumption	37 W
Outside dimensions	603 (W) × 605 (H) × 240 (D) mm
Weight	25 kg
Allowable operating temperature	+5°C to +35°C
Allowable operating humidity	5% to 90%
Max. number of selectable music numbers	99 numbers
Accessories	
Rate seal	1 set
ND sheet	2
locking plate	1
Coin sheet	1 set

LC-V20-K/LC-V20 (VIDEO DISC AUTOCHANGER)

Player model	LaserVision video disc player
Applicable discs	Laser juke disc
Power requirements	AC 220V/240V (Switchable), 50 Hz
AC outlet	
SWITCHED	2 (TOTAL 500 W MAX)
Power consumption	246 W
Outside dimensions	642 (W) × 780 (H) × 425 (D) mm
Weight	64.5 kg
Allowable operating temperature	+5°C to 35°C
Allowable operating humidity	5% to 90%
Video output	
Output level	1 Vp-p (when a 75-ohm load is applied, synchronous and negative)
Output terminal	pin jack
Sound output	
Output level	500 mV (100% modulation, 47k-ohm load)
Output terminal	stereo pin jack
Headphone output	
Output level	650 mV (100% modulation, 32-ohm load)
Output terminal	stereo mini-jack
Printer output	8-bit parallel (CENTRONIX-based)
Functions	
Discs	20
Noise reduction	automatic switchover CX on (not switchable)
Advertising play	ON/OFF
Programmed music selection	Max. 99
Best hit selection	Max. 5
Selection count output	Output to printer with Centronics 8-bit parallel interface possible
Selection commander	Up to 3 can be connected
Coin acceptor	MS-111 made by MARS (option) SENTINEL 30/35 made by COIN CONTROL LTD. (option)
Menu display	Max. 150
Coin capacity	Over 2,500 (21.4mm diameter × 1.7mm thickness)
Accessories	
Audio cord	1
Video cord	1
Terminal cover	1
Cord clasper	3
Control cord	1
Operating instructions	1
Key	1

CX is a trade mark of CBS Inc.
This unit meets the CX EXPANDING SPECIFICATION.

7. PANEL FACILITIES

- ① Menu board
- ② Fluorescent lamp for menu illumination
- ③ Arm
- ④ Coin acceptor
- ⑤ Coin box
- ⑥ Key-fixing holes for the coin box
- ⑦ Door

(Operation unit)

- ⑧ Coin insertion hole

Caution

Inserted coins will not be returned even though the coin-return lever is operated. Insert only the amount of coins needed.

- ⑨ Coin-return lever

Operate the coin-return lever when a deformed or steel imitation coin is caught. This will cause the coin to return via the coin-return hole.

- ⑩ Operation guide display
 - DEPOSIT COINS.
When this indication is lit up, you can insert coins. When it is off, inserted coins are returned via the coin-return hole.
 - MAKE SELECTION.
This indication is lit up when the system is ready for music selection.
- ⑪ SELECTION REMAININGS.
This indication shows the number of pieces of music you can select using the inserted coins.
- ⑫ YOUR SELECTION/NOW PLAYING
This indication shows the number of the piece of music entering by using numeric keys. When no key input is being done, this indication shows the number of the piece of music currently being played.
- ⑬ OPERATION KEY
 - Numeric keys
Use these keys to enter the number of the piece of music to be played.
 - CLEAR key
The selection can be canceled by pressing the CLEAR key before entering the last digit.
 - BEST HIT key
The most-popular piece of music on the location is automatically selected.
- ⑭ Coin-return hole
When a coin is inserted while the indication "DEPOSIT COINS" is off or unacceptable kinds of coins are inserted, they are returned via this hole.

(REAR PANEL)

① HEADPHONES OUT (mini jack) and LEVEL control

② AUDIO OUT (pin jacks), juke level control, and advertising play level control

These jacks connect to the input jacks of a stereo amplifier using the audio cord supplied with this system. Use the LEVEL and AD LEVEL controls to adjust the audio level for playing juke and advertising discs.

③ VIDEO OUT (pin jack)

- VIDEO OUT 1 — Juke play only. (juke)
- VIDEO OUT 2 — Juke play and advertising play. (juke/advertising)

④ CONTROL (SELECTION COMMANDER 1, 2, 3)

Connects to a maximum of three selection commanders.

⑤ AC OUTLETS SWITCHED TOTAL 500W MAX

Power supplied through this outlet is turned on and off by this equipment's POWER switch. Total electrical power consumption of connected equipment should not exceed 500W.

NOTE :

Do not connect appliances with high power consumption such as heaters, irons, or television sets to the AC OUTLETS, in order to avoid overheating or fire risk.

This can cause this equipment to malfunction.

⑥ Power switch (ON, OFF)

⑦ Power cord

(FRONT PANEL)

⑧ Printer output control button

- START — Outputs stored data via a printer.
- STOP — Stops printout.
- MEMORY CLEAR — Deletes the contents of the memory unit for the number of selections and income data.

⑨ DATA OUT terminal

Use the AMPHENOL 36-pin, CENTRONIX-based, 8-bit parallel printer to print out the number of music selections by discs or that by music pieces and income data.

⑩ HOUR METER (0 to 10,000 hours)

Displays the duration of electricity applied to the video disc autochanger.

⑪ Income counter

Displays the amount of coins deposited.
(This income counter cannot be reset.)
